harshvk8240@gmail.com | (201)952-5168| LinkedIn Profile | GitHub

Education

Montclair State University, Montclair, NJ, USA **Expected: May 2027**

B.S., Computer Science
Relevant Coursework: Computer Networks, Data Structures and Algorithms, Software Engineering I & II, Fundamentals of Programming, Discrete Mathematics

---

Technical Skills

Programming Languages: Python, JavaScript, PHP, SQL, HTML, CSS/SCSS, C, Java, TypeScript
Frameworks and Tools: React.JS, React Native, Expo, Firebase, AWS, MySQL, Firestore, NoSQL, VS Code, Flask, Anaconda, Jupyter Notebook, Nativewind CSS, Tailwind CSS, Git, GitHub, Linux Terminal, Eclipse, CPanel, GitHub Pages

---

Experience

Handshake Ai **Remote**
Annotator - Project Hedgehog **Jan 2026 – Present**

- Evaluated AI model responses and annotated datasets used for machine learning model training.
- Identified inconsistencies in model outputs to improve dataset quality and system reliability.
- Applied structured evaluation methods to support model performance improvement.

Projects

Red Hawk Wallet — Team Lead | Mobile Application Development

- Led a 6-member Agile team to design and build a secure campus digital wallet application using Android, Kotlin, Jetpack Compose, Firebase Auth, Firestore, and Firebase Storage.
- Implemented user registration, login, email verification, and access restrictions to prevent users from accessing account features before verification.
- Developed Tap-to-Pay functionality with wallet balance updates, transaction history, and secure user-based data handling.
- Built a digital student ID feature with profile photo upload, ID card preview, and unique QR code generation for each user.
- Added campus events, off-campus events, and business offers sections to improve student engagement.
- Implemented full dark mode support across the application to improve usability and user experience.
- Managed Git workflows, pull requests, code reviews, documentation, and team coordination throughout development.

ScheduleAI — Full-Stack Application Development

- Built a web-based scheduling application using rule-based constraints and input validation to support organized and conflict-free scheduling.
- Implemented backend APIs with validation and conflict detection to improve data accuracy and application reliability.
- Applied object-oriented design principles to create reusable components and maintainable application structure.
- Used Git and iterative development practices to track progress, manage changes, and improve project quality.

Go+ Programming Language Research — Student Researcher

- Conducted a comparative analysis of Go vs Go+, demonstrating how modern features (lambda expressions, list comprehensions, simplified syntax) can significantly improve developer productivity and reduce code complexity.
- Evaluated real-world applicability of Go+ across education, scripting, and rapid prototyping, identifying its potential to bridge the gap between beginner-friendly programming and high-performance systems development.
